

iCrew Timing for Coaches

Oct 26, 2026 · @Kevin Yruretagoyena

What it is

iCrew Timing turns your phone into a stopwatch for every boat in a session. Time a piece, a time trial, a practice head race or a seat race, and the results are saved in iCrew automatically. Your crews and line-ups come straight from the session, so there is nothing to set up.

How to open it

Open the session, then either:

- tap the yellow **iCrew Timing...** button on the session's launch view, or
- tap the **iCrew Timing** tile on the session dashboard.

It is available to the team's coaches and captains and to club admins, on the Premium subscription level.

Timing a piece

Set up the **Timing Controls** box once; your phone remembers your choices.

Setting	Choices
Start	All together (one Start for every boat) or Staggered (each boat's button starts it)
Where are you?	Start and finish (one phone does it all), Start or Finish (two coaches, two phones)
Piece distance	Optional, from 250 m to 2,000 m or any distance; adds splits per 500 m to the results
Finish taps	One Finish button , or A button per boat

With one phone: tap Start (or each boat's button for a staggered start), then tap as each bow crosses the line.

With two phones: the start coach taps the starts and the finish coach taps the finishes. The times are shared through iCrew, so both phones show the same results within seconds.

One Finish button is the easiest way to time a close finish. Tap **Finish** as each bow crosses, without worrying which boat it is. Then tap the boats in finishing order to match each time to its boat.

Seat racing

Tick **Seat racing** to record seat swaps between pieces. From the second piece on, the coach starting the boats sees **Seat changes for this piece?:** tap **No changes**, or **Swap rowers** and pick the two rowers who swapped. You can add a note, and tick **Also update the line-ups** to make the swap in the session's line-ups too.

The results page then shows who won each swap, for example "Sam beat Jo by 2.5 s". When two pieces have different distances, the margins are compared per 1,000 m.

Results

Every piece is saved in iCrew. Open **Timing Results** from the session dashboard, or the results links at the top of the iCrew Timing page.

- **For one session:** each piece with its boats in order, times, gaps, splits per 500 m when a distance was set, and who was in each seat. **Copy** puts a piece's results on the clipboard to paste into a message, and **Hide** removes a false start from the list.
- **For all sessions:** a summary of every session with timed pieces over the last 30 days, 90 days or 12 months, filtered by team. Tap a session to see its results.

Good to know

- **No signal on the water?** Taps are saved on your phone and sent to iCrew when the signal returns. Keep the page open until it shows they've been sent.
- **Two phones:** leave **Set time automatically** on in each phone's settings, so both clocks agree.
- **Reset** ends a piece. Boats that already finished are kept.
- **Undo last tap** takes back a mistaken tap.
